The Fathom Series from Bartco Lighting employs LED technology to achieve a UL Wet Rating in an entirely new way from its industry predecessors. By exploiting the full capabilities of unique wet rated components on the interior of the luminaire, the need for unsightly sealing hardware has been eliminated. Should any moisture accumulate inside the fixture, it is routed out through engineered channels in the housing.

Now offering modern and minimal luminaires that naturally complement exterior environments in both single fixtures and continuous, unbroken streams of light.
